I am experienced in leveraging agile frameworks to provide a robust synopsis for high level overviews. Iterative approaches to corporate strategy foster collaborative thinking to further the overall value proposition.

AIMS AND AMBITIONS

Believe in: Progress is greater than perfection

I love technological knowledge, Research and entrepreneurship. I grew up in Punjab, Pakistan, with an amazing and supportive family who encouraged my interests in Science and Nature. I started my education at a renowned institute of state (DPs) but later on he got admission in a school of Beacon house where I did his O-Levels and A-Levels. I received several certificates and awards throughout his academic carrier and also received a silver medal in O-Levels and a gold medal in A-Levels. My interest in Nature urged him to study Environmental Management in which he stood best across district. My thirst of Knowledge and exploration paved my way to the biggest institution of the country (NUST) where I am currently doing my bachelors in computer science. I also have the honor of being a part of the biggest social group in town (NCSC) and earned a great deal of experience in fund raising and polished my leadership skills. I am looking forward to establish a problem solving environment like silicon valley in my own country.

EXPERIENCE

DATES FROM – TO

JOB TITLE, COMPANY

Describe your responsibilities and achievements in terms of impact and results. Use examples, but keep it short.
